🔗 My Portfolio

Profile

As an AI and Backend Developer, I specialize in building intelligent, scalable systems that combine advanced backend engineering with modern AI capabilities. With deep expertise in Python, Node.js, and frameworks like FastAPI and Express, I design and implement robust APIs and microservices backed by databases such as PostgreSQL and MongoDB. My experience extends to integrating machine learning models, working with large datasets, and deploying AI-driven features that enhance user experience and business value. Beyond just writing code, I bring a solid foundation in software architecture, system design, and performance optimization, ensuring every solution is both efficient and future-proof.
